

WISA® plywoods and veneers.
Genuine wood for authentic parquet.

Basing beauty on years of experience

The partner for truly outstanding parquet – WISA veneer and plywood components, from one of the leading forestry companies in the world – UPM.

Having produced plywood and veneer for the parquet industry for over thirty years, our business is based on long-term cooperation - developing products and methods **with** the leading parquet manufacturers in the world, not just for them.

Our resources – UPM’s own wood procurement, a deep know-how of the forestry division, logistical services, R&D services, continuous staff training, and extreme quality control – make sure that we are always able to meet the needs of the parquet industry.

Our plywood and veneer mills have a production capacity that makes it possible for us to serve our customers flexibly and reliably, just on time.

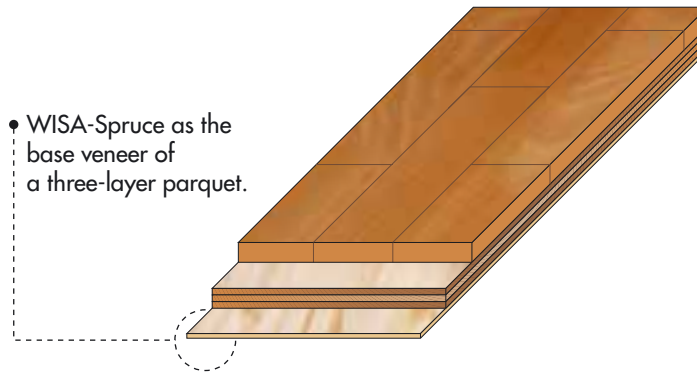

WISA Veneers

Rotary-cut spruce veneers used as base veneers

WISA veneers pass the strictest quality requirements of demanding parquet manufacturing. We concentrate heavily on critical quality factors of veneer to be used on parquet: moisture content, thickness and size tolerances.

The production process of our veneers is efficient and represents the latest technology. Only the best raw material – Nordic spruce timber – is used for WISA veneers.

• WISA-Spruce as the base veneer of a three-layer parquet.

As a strong but thin material, WISA-Spruce veneer stabilizes the structure of multilayer parquet and helps keep the board straight and even.

Standard product specifications

- thickness 2 mm
- widths 150 - 1350 mm
- lengths 1200 - 2550 mm

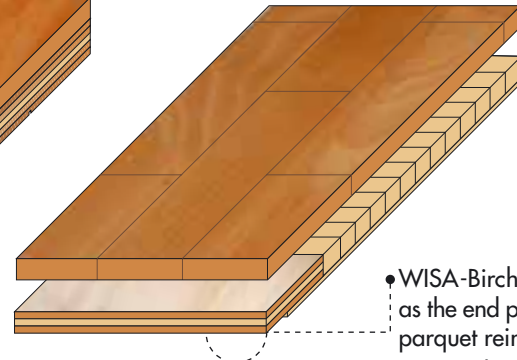

WISA plywoods

Strict size tolerances and moisture content

We deliver structurally tailor-made WISA-Birch and WISA-Spruce plywood components that are designed for the parquet type desired. Optimized in thickness, sizes and moisture content, the component is always ready to be installed.

We deliver structurally tailor-made plywood components that are designed for the parquet type desired. Components are always ready to be integrated to the parquet production process as base layers and end pieces.

Thickness tolerance is as strict as ± 0.2 mm

• WISA-Birch or WISA-Spruce as the end piece of three-layer parquet reinforcing tongue & groove structure.

• WISA-Birch or WISA-Spruce plywood as the supporting structure of a two-layer parquet.

Finnish birch has a uniform consistency combined with excellent strength properties.

Spruce plywood is an economical choice as a parquet component.

Exact and prompt deliveries

At your service when you need it

Our veneers and plywoods are an integral part of the production process of parquet, and as such they must be delivered on the exact moment they are needed – just on time.

Which is what we promise.

The deliveries of veneers and plywoods to our customers are flexible and quick. We deliver our products straight from our factories in Finland, using experienced logistical know-how and trustworthy partners. Products for the parquet industry are always packed in recyclable plastic for stabilised moisture content.

Our local sales offices and technical experts are there to provide support; whatever questions and enquiries you might have.

Not only the latest technology, but creating and improving it constantly.

Our R&D department researches and develops existing solutions and produces new, even better ones, for the parquet industry.

A special target in our research is moisture control concerning the components. Our experts also produce different types of tailor-made studies on request.

In cooperation with our customers we continuously develop further processed raw materials so that you can benefit from the use of an even more refined product.

Environmentally friendly parquet right the way through

WISA plywoods and veneers are ecological products causing very little environmental impact in their production. The raw material used comes from forests harvested according to sustainable development, and we are certified to use the PEFC label as a proof of the origins of our wood. The products themselves are packed in recyclable plastic.

In line with the environmental policy of UPM, environmental protection and continuous attention to environmental issues are an integral part of our daily work.
