

MAINTENANCE INSTRUCTIONS

WISA®-Pro Panellings Spruce 14x120 white lacquered

Removal of stains

Lacquered interior decoration panellings and mouldings are cleaned by wiping them with a damp cloth. Some alkaline detergent, such as dish-washing liquid, can be added to the washing water. The use of strong solvents should be avoided because they may deaden the gloss of the lacquered surface.

Maintenance of a lacquered surface

- Remove weakly adhering or flaking lacquer, if necessary.
- Fill in possible damages with wood cement in the colour shade corresponding with the wood species used.
- Sand the repaired spots and remove dust.
- Prime the damaged spots with NATURA interior lacquer thinned with water (10 %).
- Apply one coat of NATURA interior lacquer to the desired glossiness.
